A *variable* is a letter that stands for a number.

Thomas needs \$2 to ride the bus to Videoland. How much can he spend on video games for each amount in the table?

Thomas Has	Thomas Can Spend	
	Expression	Amount
\$5	$5 - 2$	\$3
\$7	$7 - 2$	\$5
\$10	$10 - 2$	\$8

Reteaching 1-4 Integers and Absolute Value

Compare. Use $>$, $<$, or $=$ to complete each statement.

a. $-4 \square -2$

Graph -4 and -2 on the number line.

A number on the left is less than a number on the right.

Thus, -4 is less than -2 .

$$-4 < -2$$

b. $|-4| \square |-2|$

The *absolute value* of a number is its distance from zero on the number line.

Thus $|-4| = 4$ and $|-2| = 2$.

Since $4 > 2$, $|-4| > |-2|$

Compare. Use $>$, $<$, or $=$ to complete each statement.

1. $-3 \square -2$

2. $-5 \square 1$

3. $0 \square -2$

Reteaching 1-5 Adding Integers

Use tiles and the rules for adding integers to find each sum.

a. $-4 + -3$

Four negative tiles plus 3 negative tiles gives 7 negative tiles.

$$-4 + -3 = -7$$

The sum of two negative integers is negative.

b. $-8 + 3$

Remove zero pairs

Since the signs of the integers are different, you must remove zero pairs. The number of tiles left is the number of negative tiles $|-8|$ minus the number of positive tiles $|3|$. Thus, you can always subtract the absolute values of the numbers to find how many tiles will be left.

$$|-8| - |3| = 5$$

Since there are more negative tiles than positive tiles, $|-8| > |3|$, there are negative tiles left after you subtract zero pairs. Thus, the sum is negative.

$$-8 + 3 = -5$$

Use rules or tiles to find each sum.

1. $9 + (-12)$
